# RMS MANAGEMENT AND DATA PACKAGES

While the regular RMS credit system is an excellent option for when you want to have flexibility over remote device or fleet management, if you know you'll need RMS services for a long ride, the best you can do is equip your solution with long-term, 24/7 remote control.
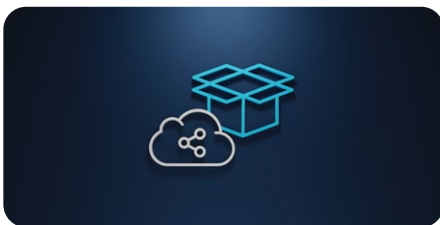

RMS Management and Data packages provide you with the same capabilities as a regular credit system, just with a different approach to them.

What's all about them? Let's see!

// RMS MANAGEMENT PACKAGE

• This package gives you access to RMS Management services;
• You can order the Management Package for either 5 or 10 years of continuous services;
• You can move your devices from one RMS company to another without losing the Management Package services.

// RMS DATA PACKAGE

• This package enables support of RMS Connect and RMS VPN services;
• The Data Package can be used only to one specific router or gateway;
• After assigning the Data Package to a specific device, it only expires after 10 years or when 150 Gigabytes of data have been used up;
• The package's data gets used only when communication goes through the selected device it's assigned to.

Although these packages are purchasable individually, they go great together as they complement each other with access to different RMS functionalities.

Important to note:
• Once the packages are activated, they cannot be stopped or paused;
• Packages aren't stackable, so don't assign multiple Management or Data packages for the same device!
• All validity periods automatically start 2 years after your purchase if they weren't activated manually.
